<b>AGENDA ITEMS</b>		<b>PRESENTER</b>
<b>Predictive Services Update:</b>  Scattered showers and thunderstorms are expected again today across the higher elevations of UT, into eastern NV and ID with local areas of wetting rains.  A strong low pressure trough off the west coast will move east and push a cold front through the Great Basin Saturday night/Sunday. This front is much stronger than what would typically move through the Great Basin in late August. Ahead of this front, winds will start increasing today, but increase more significantly tonight through Saturday across the region with SW wind gusts 40-50+ mph in the valleys and higher gusts in the mountains, especially across NV and ID. The strongest winds in the early morning are expected along the Sierra Front/northwest NV and by the afternoon will spread across ID and the northern 2/3 of Nevada/Sierra. RH will be increasing overnight tonight into Saturday morning along with cooler temperatures, however will still drop into the 14-25% range, with the strength of the winds will likely overcome this increase in moisture.		Predictive Services
<b>New Fire Activity/GACC Update:</b> 13/5 11,976 Teepee made a large run overnight 15000 acres. Rapid had 1000 gain overnight.		Center Manager/COD
<b>NMAC Update:</b> NMAC support for extension requests. Eleven mile and Rapid Big fire day yesterday for every GACC. Need to discuss the T3 IMT to NR		NMAC Liaison

Will come down next week Tue/Wed
